

?

Furthermore

we

can

also

ex-

pect

the

y

ar-

rays

to

be

strongly

run-

length

com-

press-

ible.

This

is

be-

cause

pop-

u-

la-

tion

ge-

netic

struc-

ture

means

that

there

is

lo-

cal

cor-

re-

la-

tion

in

val-

ues

due

to

link-

age

dis-

equi-

lib-

rium,

which

means

that

hap-

lo-

types

with

sim-

i-

lar

pre-

fixes

in

the

sort

or-

der

will

tend

to

have

the

same

al-

lele

val-

ues

at

the

next

po-

si-

tion,

giv-

ing

rise

to

long

runs

of

iden-

ti-

cal

val-

ues

in

the

y

ar-

ray.

So

the

can

dis-

ily

be

stored

in

smaller

space

than

the
